

CataPure

CHATFIELD
WATER SYSTEMS

Congratulations on your purchase of the Chatfield CataPure Water Conditioner! We're so excited for you to experience the difference it makes in your home.

Get ready to say goodbye to those unpleasant odors and impurities that have been plaguing your water. The CataPure, with its advanced carbon-based filtration, is expertly designed to neutralize chlorine, chloramine, and those pesky organic compounds that can create unwanted tastes and smells.

But the CataPure does more than just improve the taste and smell of your water; it provides peace of mind. By removing harmful substances, you can be confident that the water flowing from your taps is cleaner and healthier for your entire family.

You've made a great choice in selecting the CataPure, and we're confident you'll enjoy the benefits of truly pure and refreshing water for years to come. We're here to support you on your journey to better water, from installation to maintenance and beyond.

Screen Information & Selection

"In Service" lets you know that the system is operational.

Shows the amount of gallons the system has until it needs to **regenerate**.

Shows the days left the system has until it needs to **regenerate**.

Shows how many gallon per minute are flowing through the unit

*If Equipped - Some units do not have a gallon counter installed

IN SERVICE / 2400 GAL / 14 DAYS / 0.0 GPM

Regeneration
This selection is to *force* the
system into regeneration.

REGENERATION

The unit will regenerate, also know as clean itself, at some frequency. This process is when water will be utilized to clean the media inside the tall tank.

DID YOU KNOW?

IMPORTANT

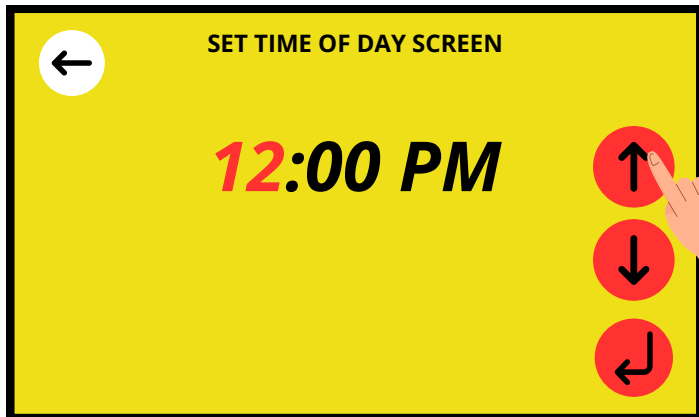

TIME

The most important thing you can do as the owner of a Water Conditioner is to ensure that time is always correct. This is important because your installation team has programmed the unit to **regenerate** at a certain time, generally at 2 AM. The unit can be programmed to regenerate at any time.

How to SET the Time

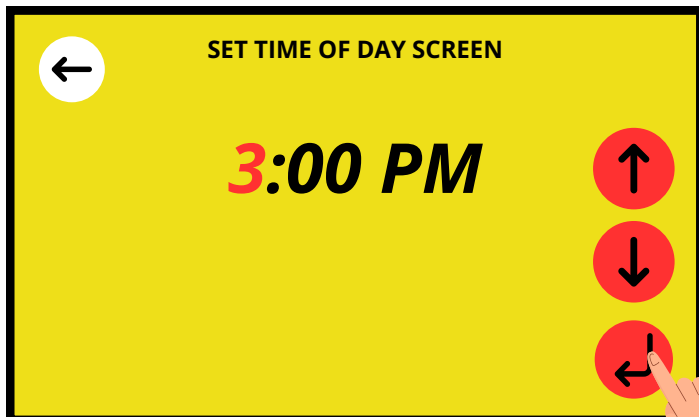

Place your finger over the time of day.
Press and Hold for 5 Seconds until
the screen changes.

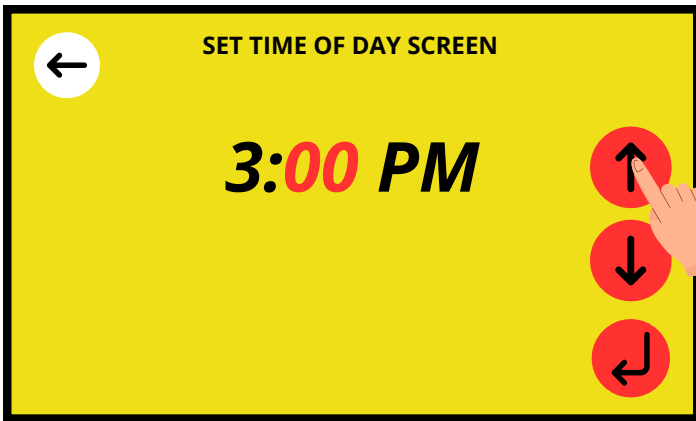

Adjust the HOUR by pressing
the up or down arrows.

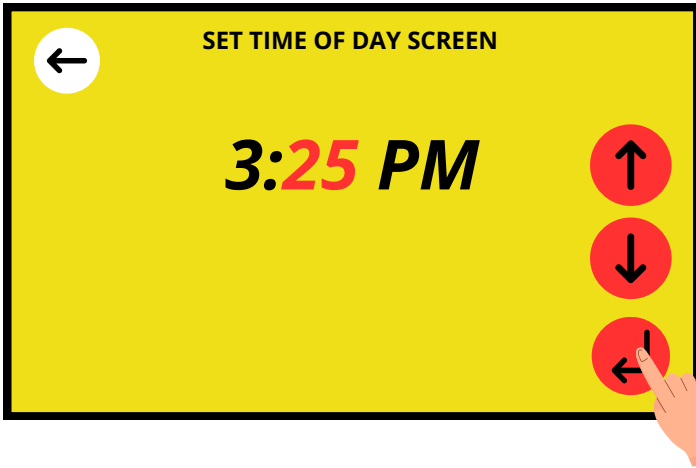

The HOURS need to adjusted to
account for AM or PM

Once the HOUR has been selected
press the enter arrow to set.

Adjust the MINUTES by pressing the up or down arrows.

Once the MINUTES have been selected press the enter arrow to set.

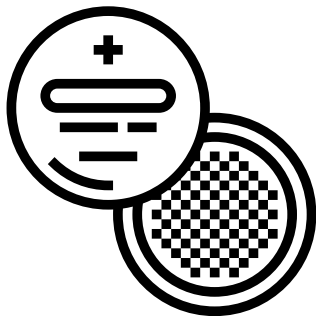

You have now programmed the time.

The unit DOES NOT account for daylight savings. Make sure to adjust the time when it is necessary.

Please note: during extended power outages your unit may "lose" time - similar to other appliances in your home.

There is a back up coin cell battery that will sustain the correct time for up to 8 hours. This battery will need to be replaced after frequent power outages or yearly.

Battery Required: CR 2032

BATTERY REPLACEMENT

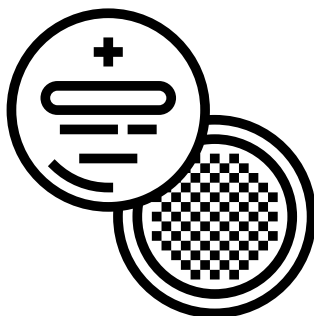

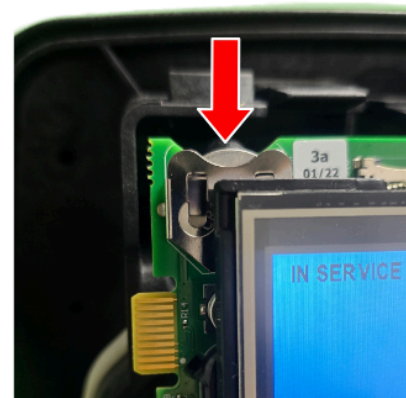

Gently lift tabs on the sides and pull plastic face plate toward you.

Battery is located here

Push up to remove battery

Insert a new CR-2032 Battery and gently press down to seat the battery in

Battery Required: CR 2032

BYPASS

Knowing where the bypass is and how to use it is an important part of ownership. If, for any reason, your treatment system has an issue you may be told by customer support to place the unit into bypass. Follow the instructions below.

This orientation of the RED handles indicates that the system is treating the water

Turning the handles, following the arrows, to place the unit into bypass

When the red handles are pointed at each other you have successfully bypassed the unit. The water is no longer being treated.
