

At Chatfield Drilling, we follow a comprehensive three-step approach to address bacteria concerns, ensuring the drinking water supply is safe and giving the end consumer complete confidence in the quality of the water supplying their home. Whether it's the buyer or seller requesting a bacteria sample, our process remains consistent:

- Testing – Conducting thorough water tests to assess bacteria levels.
- Consumer Chlorination Kit – Applying a chlorination treatment to disinfect the system.
- Constant Disinfection – Installing a constant disinfection system for long-term protection and peace of mind.
